I would consider writing/publishing an article in Nursing in Critical Care. Tick one box only

Answered: 173 Skipped: 91

	Response Percent	Response Count
Yes	61.85%	107
No	38.15%	66

What factors affect you when considering writing for/publishing in Nursing in Critical Care? Please state your answer

- 1) The journal is too academic and dry. I write for other journals, on more general and ICU topics, but NICC seems to only want obscure research studies at the expense of more informative and accessible articles
- 2) I don't have time at present as I'm doing my masters
- 3) Level of guidance and support provided with getting published plus how well known and read the journal is with its target audience.
- 4) Time management, how to write concisely.
- 5) Relevance of topic for critical care community
- 6) Never written an article for publishing before-but it's my aim for this year! I guess advice in how to write an article and chance of publication would be key factors
- 7) My innovation in my patient profile is changing practice but I am not confident in academic writing and I am sure there are other Critical Care Nurses who miss opportunities to share in their ideas because of this. Up to the standard of writing for the BACCN
- 8) no time to do so
- 9) How relevant it is to share widely the subject matter.
- 10) a respected journal, this isn't that
- 11) Target audience
Ranking of journal on SCOPUS
- 12) Negative unhelpful reviews by reviewers. Feedback is part of the process of publishing but the negative comments just put me off.
- 13) Nothing to write about yet
- 14) Knowing the process required
- 15) the reader
- 16) Time
Relevant personal academic work
- 17) Time, subject matter.
- 18) It would be an experience /reflections rather than an academic referenced article .
- 19) Guidance and time constraints
- 20) knowing how to do it and where to start.
- 21) Trying to decide on a new/interesting area and just finding time to actually do the work
Laziness and inexperience I guess !!
- 22) Support available
- 23) Academic ability
- 24) The type & quality of articles that are being published.
The feedback received when I do submit
- 25) I do not have the time and am getting a little old but encourage my staff to write
- 26) Not particularly academic
- 27) Professional and personal growth

Academic challenge and opportunity
New ideas/innovation
Service improvement
Information and knowledge sharing

28) Impact factor, credibility
Relevance to readership

29) I am a peer reviewer but not for this journal

30) My overall practice, experience, timing and nature of my job.

31) My level of involvement within my unit and nursing profession.

32) Focused audience

33) Time that is taken to finalise articles

34) Reach

35) The clarity of the guidelines and whether it reflects the format of the journal.

36) Don't think good enough. Would like someone to guide.

37) How to format

38) Subject area.

39) Not sure what to write about and new in post

40) I have enough work to do as it is

41) Time constraints
Having relevant examples that are good enough for publication

42) Not knowing how to write a journal article

43) I can not be bothered

44) Do I have the time

45) Impact Factor

46) Mentoring in writing for publication

47) heard of its reputation for high rejection rates, don't see much on education in journal

48) Unable to get advice on style of writing.

49) Not something I have considered

50) Having the time

51) Support from work

52) The subject is not interesting enough, time,

53) support in article writing

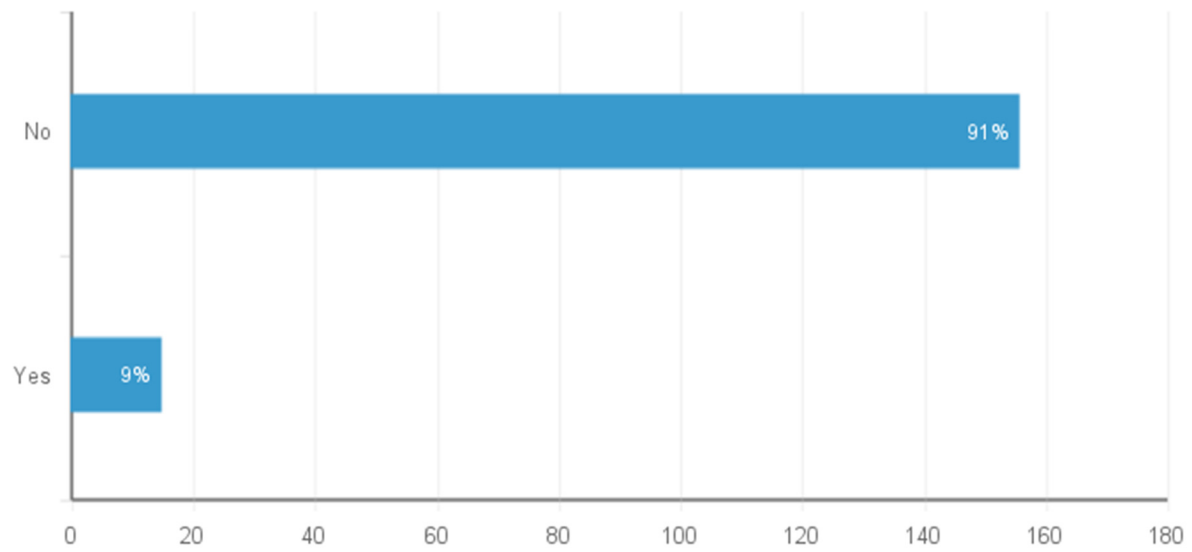

54) Difficulty in gaining publication compared to other competitor journals.

55) Involve the critical care networks more we can access the good practice in our own networks

56) Useful feedback following submission. My feedback was unkind and unconstructive. I published elsewhere in the end, but your journal was my first choice.

I am a peer reviewer

Answered: 171 Skipped: 93

	Response Percent	Response Count
Yes	8.77%	15
No	91.23%	156

Strategically, I think the NICC Journal should take the following direction - please state your answer.

1) Less academic, more accessible

2) Maintain a paper copy option but definitely focus on modern based app options with more member interaction.

3) I like the current mix of research and non-research articles. I think quality improvement is very high on the agenda in the NHS and those types of articles also very good. It would be great if more clinical nurses and junior staff wrote articles based on their clinical experiences and practice to draw in wider audience (nurses new to critical care, encourage students on ICU courses to publish, good for their professional development CVs etc)

4) Kept the same, I enjoy reading my posted copy and not sure if I would read it so much online.

5) oh for goodness sake, why change it at all? It does what it needs to.

6) Whilst the international papers provide a broad perspective in critical care nursin. There are now too many and it is not relevant to UK practice. If this is the direction the editors want to go in then the journal should be relaunched as the international nursing in critical care. I have stopped reading NICC due to the continued lack of relevance to my area of practice.

7) It would be really useful to include critical Care

Outreach occasionally. I was a critical care nurse and now work in CCOT. I like to keep updated but also like to keep fresh in ward critical care skills and knowledge.

8) Continue

9) Online and more scientific

10) Maybe more contributions from British authors? I would certainly not want it to be exclusively British but results from studies in the UK would be more transferable.

11) more sections for specialities ie. cardiac, Neuro.

more practical advice on auditing, change management, encouraging how to do write an journal article, how to peer reviews, more cpd and case studies.

12) More direct clinical care advice / reviews

Maybe a letters / discussion page or "ask the expert"

Could we get some facts / figures (maybe linked to ICNARC) about things such as bed capacity, staffing, dependencies etc

Overall I think the journal needs to be a bit more of an engaging read and a bit more "newsy"

Consider some profiles of staff in different roles related to ICU practice (Manager, band 5 , Lecturer, HCA etc)

Might be good to open the journal (and BACCN) out to students at a reduced rate or via a uni subscription as it is relevant to a lot of the part 3 placements.

13) Would be nice to see more focus from UK based projects - international projects sometimes irrelevant or outdated for UK readers I feel

14) More work that is UK based and directly relevant to UK NHS culture, policies and practices.
Less 'pure nursing research' and more on other areas of clinical research and clinical practice within critical care.
More UK case studies (to make it more relatable to nurse practicing in critical care)

15) Maybe cater for more junior staff? With articles that are more practical?

16) Online option save on print and will be available more readily and timely.

17) The content quality of NICC journal is excellent.

The NICC should be available online as well as a hard copy sent via post.

18) More clinical focused

19) wider inclusion of differing fields of it

20) Continue the excellent work.

21) Publish more high quality research

22) QI focus, national guidelines and research studies relating to clinical care, innovation

23) More UK studies published

24) more of a mix academic and informal stories etc

25) Modernise and increase/improve accessibility online.

26) Not sure

27) follow the lead of the american journal of CC Nursing
more articles for junior staff new to critical care

28) be more balanced - and suited to its membership with clinically relevant lit review or CPD topics /articles for guidance on practice as well as research - we need to help clinical staff

29) More challenge in terms of questions and the end that count as CPD and towards revalidation

30) Prefer not to answer

31) Practice

32) I would like to see upto date, researched guidelines, policies and procedures.

33) Concentrate publication of UK articles.

34) Become more multidisciplinary like ICS we need it more these days in the nhs
We should learn from each other

35) Continue to support current practice. Support early career researchers in the field.

36) No comment

37) British critical care issues with input where relevant from overseas.
Look at managing, supporting and developing the critical care workforce

38) More information articles such as literature reviews. Maybe ask key figures to submit updates on their work. Do something so I could use reading an article for revalidation purposes.
Like having a good impact factor but is intensive and critical care nursing also aiming for that and so how does this one meet needs of junior staff? Maybe need to show that more, such as focusing on opportunities for CPD through the journal.

39) Consider having open - access to some articles

40) Physiological bases, project management, team building, resilience within critical care

41) More clinical and less research from other countries which often has little relevance to ICU in the UK.

42) Become less research focused and more informative about critical care practice and innovation. Also focused on clinical situation in the UK.

43) Much more varied content on clinical practice. Too much focus on the same subjects for many years. It would be nice to see some different subjects and aspects of clinical care. Way too many 'nurses perceptions of' articles. More articles focussed on practice in the UK too.

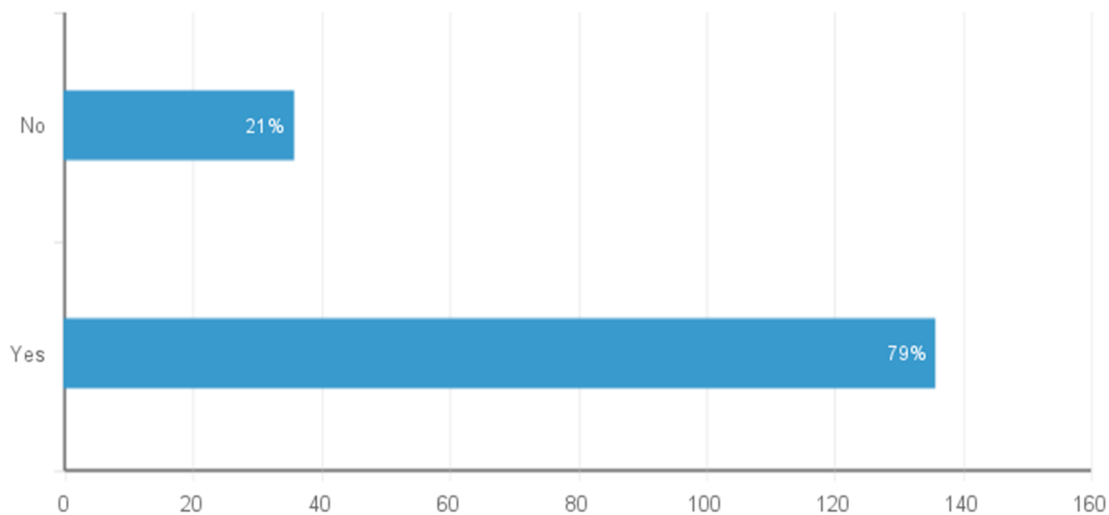

44) Shorter more uk relevant to practice articles it sometimes feels they are just for the academics people want to read a what to do if or this happened to me with evidence base

45) Supporting positive change in critical care nursing practice through delivery of high quality evidence and research articles.

46) Publish more original empirical research

Are you a member of the British Association of Critical Care Nurses (BACCN)?

	Response Percent	Response Count
Yes	68.28%	99
No	11.72%	17
Unsure	20.0%	29

Is there anything you would like to add about the Nursing in Critical Care Journal? Please state your answer.

1) Even though we're living in a more tech based/paper free society I personally still like to have the option of a hard copy journal to read but I think both options should be available. I place great value on the existence of this journal and the information it provides.

2) Excellent journal which provides lots of valuable information.

3) I debated about the hard copies - I think some people probably read more of the articles because it comes in the post and is a prompt. But the financial cost and carbon footprint may not warrant that and an app with an alert may serve the same type of purpose? Or email alert with links when full issue is available.

4) I recommend learners and colleagues join the BACCN, part of the rationale for this access to the journal and it's back catalogue

5) It is far too woolly. All qualitative nonsense or dreadful literature reviews

6) I enjoy reading this ... I have been off sick a while this year and I feel this journal has helped mecsrsy in touch with my role xxx

7) No

8) I would support a section suitable for junior staff a learning section i.e basic update on inotropes/arterial lines/ ngt, there use in practice the risks the best supported management. Etc..

I feel that the journal can isolate this category of nurses as the journal can be too academic and aimed at senior nurses. I believe Baccn would have a greater uptake if the journal could be more practical in this way. Especially in an area where competencies are a band 5/6 goal for their careers. It also would support the new intake of newly qualified and new to ITU nurses who have that hunger to learn too

9) Would access online publications

10) Nothing to add

11) make it easier for members who have done reviews for itu course to upload and share up to date knowledge.

12) Thanks for all the hard work - it is our major ICU journal and to be honest a shame it seems to get thinner every month. Should it be on open access but with advertising ?

13) Add a CPD article that we could use to answer questions on

14) The biggest limitation with the NICC journal is the same names/authors appear year in year out. More needs to be done to encourage people to publish their work so there is diversity in topics and contributions from the wider critical care population

15) I am in the field of cardiothoracic critical care and would like to see more articles with this speciality

16) Thank you for providing us with informative, insightful and updates news and articles! I am surely continuing my membership

17) More protocols/ guidance on practical elements of CC nursing

18) i would like to see more UK based studies and articles

19) Including vacancies and conferences would add value

20) I agree with stopping postal journal for environmental benefit, but I find receiving a hard copy useful. Could a PDF copy of the journal be emailed to members instead, to make the best of both worlds?

21) no

22) as above; I would like to see more articles aimed at staff new to ICU

23) PLEASE i love the Impact Factor BUT the journal needs a bit more life into it for our junior staff too

24) I used to be a member of the BACCN but I stopped due to the cost implications.

25) I find the Journal informative and relevant and educational.

26) no

27) Maybe consider having a brief question section or ask an expert

28) I tend to only focus on very few articles as I am educator. Maybe need more aimed at the changing social/economic pressures in ICU's across world as well as clinical papers

29) Refresh and relaunch with a clinical focus and new editors

30) Updates on current trends reflecting changes coming from the IC-S etc.

31) I believe it needs to become more readable and contain clinical information and articles about bedside practice e.g. can adrenaline ever be given peripherally (IV continuous). Discuss / debate / highlight some perennial issues in critical care nursing. Add some human interest stories about critical care nursing?

32) not at this time

33) I understand the need for high quality academic evidence base but it needs to be interesting and accessible and last couple of years there has been a decline in articles that ICU nurses on the floor can relate to

34) The editorial is also really useful some key points of the discussion of the literature are included in this section.
